Department of Building

You acquire **holistic skills**
and **multi-disciplinary**
expertise.

Students' viewpoint.

"The PFM programme is a versatile course that combines the best of both management and technical-oriented subjects supported by holistic experiential hands-on learning and industrial exposure through internships.

The diversified curriculum includes business related subjects such as economics, statistics, cost calculations, human resource management and construction law and arbitration. Simultaneously, we also pick up essential technical skills such as visualisation and surveying, which help us develop ourselves as leaders in this niche field".

- Ronald Chin, Year 1 PFM student

NUS School of Design and Environment

project & facilities management.

managing the full spectrum
