

Our graduates are industry leaders who shape policies, solve strategic & operational problems, and implement best management practices in the built environment.

Bachelor of Science (Project & Facilities Management)

The programme's diversified curriculum has a strong emphasis on new knowledge, skills, tools and techniques to manage projects and facilities with international, regional and local perspectives. Building a strong foundation for our graduates to be agile leaders who are adept at anticipating and responding to change, the programme focuses on time management, cost management, quality management, risk management, procurement and dispute management, and strategic facilities management.

You play a role in **creating** and **managing** the **masterpieces** of the built environment.

Career opportunities. The rise of emerging economic giants worldwide – China, India and the Middle East, has seen an increased undertaking of ambitious multi-faceted projects. This provides numerous opportunities and rewarding careers in most industries.

As a Project Manager, one plays a key role in directing the planning, designing and commissioning of projects and its successful development and completion. Facilities Managers fulfil the role of managing physical facilities in a sustainable manner that enhances the value of fixed assets and explore deeper into factors that influence cost and productivity. Graduates also work as Contract Managers and Quantity Surveyors in the construction industry.
