School of Design and Environment

mission:

To create and impart knowledge, and to foster innovation and enterprise in Architecture, Industrial and Urban Design, Building and Real Estate.

vision:

To be the leading global institution for excellence in education and research.

The National University of Singapore School of Design and Environment (SDE) consists of **three departments which complement one another:**

Architecture, including Industrial and Urban Design; Building; and Real Estate. SDE strives to foster an innovative and intellectually vibrant culture for excellence in learning and research, and a spirit of enterprise in these disciplines with a focus on Asia and the Tropics.

The school also hosts the multi-disciplinary **Master of Science (Environmental Management)** programme, which draws on the expertise of various faculties within NUS and established government agencies, corporate entities and academic institutions locally and globally.

Research Excellence. In its bid to achieve research excellence, the School of Design and Environment has identified the following areas as their focus areas:

- Sustainable Urban Development
- Indoor Environment and Energy
- Green Building Technologies
- Project Management and Construction Law
- Real Estate Finance and Investment
- Urban Economics and Housing

The key operational principle underpinning the School's research efforts is "integration". Particular emphasis is directed towards the development and delivery of integrated and high performance buildings throughout the entire building delivery process involving planning, design, construction, maintenance and management. To augment the research focus areas, the School, under the ambit of the departments, has established a number of research centres.
